Receipt is acknowledged of the RCE filed on 28 April 2011. By this submission, a new IDS has been filed.

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 28 April 2011 has been entered.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 28 April 2011 was filed after the mailing date of the Notice of Allowance on 27 December 2010. The submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Allowable Subject Matter

3. Claims 1-29, are allowed.

The following is an examiner's statement of reasons for allowance:

With regard to claim 1, the prior art fails to teach or fairly suggest an exposure apparatus that exposes a substrate through a liquid comprising, a timer that measures the time that has elapsed since the supply of the liquid by the liquid supply mechanism was started, and a control apparatus that determines, based on a measurement result of the timer, whether a space, which is between the image plane side tip part of the projection optical system and the object and includes at least an optical path of the exposure light is filled with the liquid, in combination with the other elements required by claim 1.

With regard to claim 6, the prior art fails to teach or fairly suggest an exposure apparatus that exposes a substrate through a liquid comprising, a timer that measures the time that has elapsed since the supply of the liquid by the liquid supply mechanism was stopped; and, a control apparatus that determines, based on a measurement result of the timer, whether the liquid has been recovered from the space between the image plane side tip part of the projection optical system and the object, in combination with the other elements required by claim 6.

With regard to claim 9, the prior art fails to teach or fairly suggest an exposure apparatus that exposes a substrate through a liquid comprising, a first measuring instrument that measures the amount of liquid supplied by the liquid supply mechanism; a second measuring instrument that measures the amount of liquid recovered by the

liquid recovery mechanism; and a control apparatus that determines, based on the measurement results of the first measuring instrument and the second measuring instrument, whether a space, which is between the image plane side tip part of the projection optical system and an object opposing the tip part and includes at least an optical path of the exposure light, is filled with the liquid, in combination with the other elements required by claim 9.

With regard to claim 13, the prior art fails to teach or fairly suggest an exposure apparatus that exposes a substrate through a liquid comprising, a measuring instrument that measures the amount of liquid recovered by the liquid recovery mechanism since the supply of the liquid by the liquid supply mechanism was stopped; and a control apparatus that determines, based on the measurement result of the measuring instrument, whether the liquid has been recovered from the space, in combination with the other elements required by claim 13.

With regard to claim 16, the prior art fails to teach or fairly suggest an exposure apparatus that exposes a substrate through a liquid comprising, measuring the time that has elapsed since the start of the supply; and determining that the space is filled with the liquid at a point in time when the elapsed time exceeds a prescribed time, in combination with the other elements required by claim 16.

With regard to claim 17, the prior art fails to teach or fairly suggest an exposure apparatus that exposes a substrate through a liquid comprising, measuring an amount of liquid supplied and an amount of liquid recovered per unit of time; and determining that the space is filled with the liquid at least one of the point in time when the difference

between the amount supplied and the amount recovered has become less than a prescribed value, or the point in time when a prescribed time has elapsed since the difference between the amount supplied and the amount recovered became less than the prescribed value, in combination with the other elements required by claim 17.

With regard to claim 19, the prior art fails to teach or fairly suggest an exposure apparatus that exposes a substrate through a liquid comprising, measuring the time that has elapsed since the stopping; and determining that the recovery of the liquid that filled the space is complete at the point in time when the elapsed time exceeds a prescribed time, in combination with the other elements required by claim 19.

With regard to claim 20, the prior art fails to teach or fairly suggest an exposure apparatus that exposes a substrate through a liquid comprising, measuring an amount of liquid supplied and an amount of liquid recovered per unit of time; and determining that the recovery of the liquid that fills the space is complete at least one of the point in time when the amount recovered has become less than a prescribed amount, or the point in time when a prescribed time has elapsed since the amount recovered became less than a prescribed value, in combination with the other elements required by claim 20.

Claims 2-5, 7-8, 10-12, 14-15, 18, 21-29, are allowable by virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
